## DETAILED ACTION

### *Drawings*

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 11 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Bauer (US 4,402,581).

Regarding claim 1, Bauer discloses a "film feed mechanism (column 1, line 60) in a motion picture camera (column 1, lines 60-61) with at least one transport grip (Fig. 1, ref.# 11) which, has a transport grip clip (Fig. 1, ref.# 11') and at least one transport grip tip (Fig. 1, ref.# 8) which through the kinematics of the transport grip, projects into the

perforation of a motion picture film (Fig. 1, ref.# 9) which is to be transported at a predeterminable film transport speed, moves the motion picture film intermittently (column 1, line 61), and runs through an elongated curved path (column 2, lines 3-4) which is closed and whose reversing points determine the stroke length of travel during the transport of the film (Fig. 1, ref.# 9), wherein the kinematics of the transport grip is changeable in dependence on the film transport speed (column 6, lines 10-13 teaches that the speed of the drive shaft is adjustable, thus the speed of transport grip is adjustable)."

Regarding claim 2, Bauer discloses wherein "the kinematics of the transport grip is changeable at least one of dynamically and statically." (Column 6, lines 10-13 teaches an adjusting knob which is used to adjust the speed of the drive shaft, and thus transport grip, dynamically or statically.)

Regarding claim 11, Bauer discloses wherein "the kinematics of the transport grip is changeable by means of a mechanical control member (Fig. 9, ref.# 78) connected to at least one of a grip drive (column 6, line 10-13), the transport grip and an the attachment."

Regarding claim 13, Bauer discloses wherein "the at least one locking grip (Fig. 6, ref.# 62) has a locking grip lever (Fig. 6, ref.# 67) connected to an attachment (Fig. 6, ref.# 81) on the control element (Fig. 6, ref.# 65), and a locking grip clip (Fig. 6, ref.# 62) which is connected to a locking grip tip (Fig. 6, ref.# 72) of the locking grip."

***Allowable Subject Matter***

4. Claims 3-10, 12 and 14-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***
